

AUGER BITS

- market leader in Innovation & Quality.

Their ongoing commitment to the study of metallurgy has allowed them to deliver a more durable AUGER that retains its sharpness.

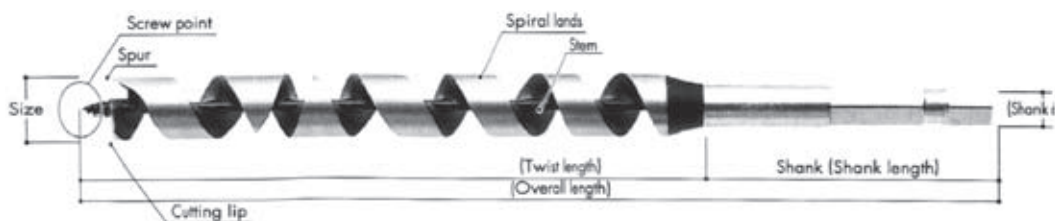

NO. 4 & NO. 6 SERIES

- These ranges are often referred to as **CLEAN CUTTING AUGERS**, due to the clean cutting wing, or spur on the front.
- The spur pre-cuts the material before the cutting edge & provides a clean entry & exit to the timber.
- The screw point pulls the bit through. The single twist or flute clears the chips & leaves a cylindrical drilling body to aid straight drilling.
- These bits drill a tidy hole without surface breakage & are best suited to **SOFT WOODS** such as those found in house frames.
- Common users of these auger bits are carpenters, electricians & plumbers.

NO. 8 HARDWOOD SHIP AUGERS

- These are also known as **SHIP AUGERS**. Hardened to increase bit life.
- Despite a hardness of 57-58 Rockwell C, augers can be sharpened with a needle or diamond file or mounted point.
- Ideal for use in **HARDWOOD** applications such as telephone poles, timber bridges & pest control applications.
- Ship Augers have an extra cutting edge turning backwards from the leading edge to clear & size the hole. The absence of a cutting wing offers easier drilling through hardwood.

NO. 4L - EXTENDED LENGTH DRILL AUGER BITS

This auger is recommended for deep boring over 240mm—the auger maintains high precision and eliminates lateral vibration.

NO. 4S - STANDARD DRILL AUGER BITS

These augers can withstand high speeds yet possess the precision to be used over a wide range of holes from shallow to deep.
