

The boundary kit is generally located immediately adjacent to the front boundary of the property and allows the property to be isolated from the pressurised sewer pipeline in the street. The boundary kit comprises of a keyed isolation ball valve, swing check valve and an inspection tee arrangement.

The boundary kit access box is designed to house the boundary kit arrangement. The box is constructed from polypropylene with a removable, reinforced, recessed cover. The design allows for simple installation after pipework and valving are in place.

General Specifications:

- 32mm stainless steel ball valve with female BSP thread
- Stainless steel tee with plug
- Stainless steel swing check valve
- 32mm male BSP fitting
- Polypropylene constructed box
- Bottomless for easy installation of boundary kit
- Reinforced lid

Typical Arrangement and Installation
