CONTROLLER DETAILS

The BiANCO NXT-SPC (Single Pump Controller) provides control and protection for an individual single phase pump.

The controller is simple to operate. The user not only enjoys superior control and protection of the pump but the user display provides user information about the running state of the system.

By digitally monitoring the running current, the response time of the BiANCO NXT SPC is superior to traditional analogue overload methods.

NXT-SPC has 2 x passive dry contacts and is equipped with a RS485 modbus interface to connect to a BMS

- Manual or Automatic operation
- NXT-SPC has an audible alarm and a flashing light to indicate an alarm state. It supports an external alarm unit
- Pump accumulated running time memory
- Pump start / stop delay time setting
- Last 5 error log

PROTECTION FUNCTIONS

Protection functions can be set, enabled or disabled independently

- Over voltage
- Under voltage
- Dry Run (under current)
- Overload (over current)
- Pump stall
- Open phase protection
- Pump 'Anti-seize' function (96 hr default)

CONTROL INPUT

• 4-20mA level or pressure transmitter
